# Seasonal Forecast

Weather. Impact on Your Business.

Your weather-sensitive trade products and company divisions will be much more predictable with the Meteomatics Seasonal Forecast. Deviations of past long-term trends and long-term forecasts of weather models (i.e. ECMWF, UK MetOffice, Météo France, NCEP) are used to provide you with high quality data. Our new and methodically unique concept can be used globally and is delivered in CSV or FTP format, of course, other data formats can be generated upon request. The Seasonal Forecast supplies you with:

1. Prediction of temperature trends and anomalies up to 7 months in advance
2. Early indication of significant weather trends: temperature swings, cold spells...
3. Minimum-, maximum- and average temperature

Whether you work in energy trading, in construction industry, in transport or in agriculture, you always have a reliable partner for long term planning at your side with our Seasonal Forecast.

## Your Benefits

- Timely recognition of hot spells, cold periods and weather changes
- Forecasts for countries and regions,
- Daily resolution

## Industries

- Energy & commodity trading (gas, electricity)
- Agriculture (growth periods)
- Construction
- Logistics and transport
